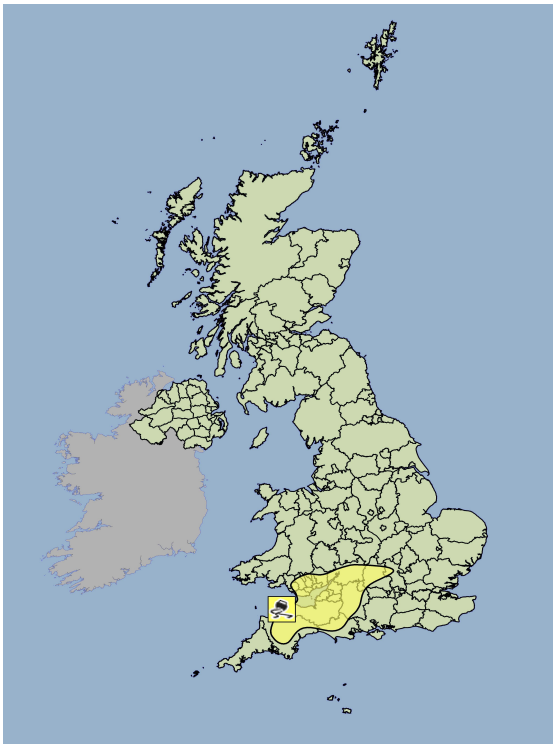
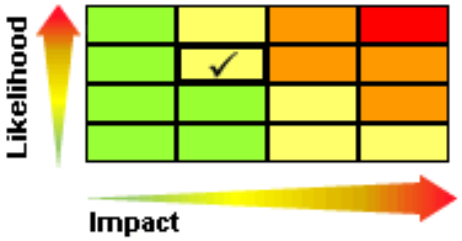
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold and showery westerly airstream will become established across England and Wales during Wednesday evening, with the showers turning to a wintry mix overnight. Heavy showers of hail may lead to a temporary covering of hail at lower levels, whilst localised accumulations of 1-3 cm of snow are possible on roads above 200-300 metres.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:15 on Thu, 13th Feb 2014** until **09:00 on Thu, 13th Feb 2014**

A mix of rain, sleet, snow and hail showers are likely at times overnight, whilst some temporary slight accumulations of snow are possible on ground above 200-300 metres.

With road temperatures falling to around zero inland, the public should be aware of the risk of ice, chiefly over high ground, but also locally to lower levels where hail showers occur.
